PROFESSIONAL SUMMARY

Cloud Platform Engineer with 5+ years of hands-on experience designing, automating, and operating enterprise-scale cloud infrastructure across AWS, Oracle Cloud (OCI), Azure, and GCP. Proven track record delivering production-grade infrastructure automation, Infrastructure as Code (IaC), CI/CD pipelines, and cloud security controls across 200+ servers and 20+ AWS accounts. Deep expertise in AWS platform engineering, Linux administration (RHCSA-certified), incident management, IAM governance, performance optimization, and system reliability. AI-ready engineer with demonstrated ability to independently own complex, multi-cloud platform challenges from architecture through operational support.

TECHNICAL SKILLS

Cloud Infrastructure: AWS (Primary), Azure, OCI, GCP — Multi-account, Production-scale

AWS Services: EC2, Lambda, SSM, IAM, AWS Backup, Secrets Manager, SNS, CloudWatch, VPC, S3, Systems Manager

Infrastructure as Code: Terraform, CloudFormation, Infrastructure Automation, IaC Governance

Platform Engineering: PaaS Architecture, Cloud Architecture Design, Proof of Architecture, Environment Provisioning

Automation & Scripting: Python, Bash, Shell Scripting, AWS Lambda, Event-Driven Automation

CI/CD & DevOps: GitLab CI, GitHub Actions, JFrog Artifactory, Pipeline Automation

Containers & Orchestration: Docker, Kubernetes (K8s), Container-based Deployment

Monitoring & Observability: Datadog, CloudWatch, SNS Alerting, Performance Optimization, Incident Management

Operating Systems: Linux Administration — RHEL, Amazon Linux, Oracle Linux (RHCSA Certified), Windows Server

Cloud Security & Networking: IAM, Cloud Security, Secrets Management, VPC Networking, Compliance (SOX), Cloud Governance

PROFESSIONAL EXPERIENCE

Deloitte | **Hybrid Cloud Engineer / Cloud Platform Engineer** | *Kolkata, India* | *2019 – Present (5 Years)*

- Architected and administered cloud infrastructure across 20+ AWS accounts managing 200+ production servers, serving as the primary SME for cloud platform engineering and incident management escalations.
- Designed and deployed cross-account AWS automation solutions using Python-based Lambda functions with IAM role assumption, enabling centralized governance and reducing manual operational overhead by over 40%.
- Built zero-day Windows patch automation using AWS Systems Manager (SSM) and Lambda, reducing patch deployment cycle time from ~6 hours to ~3 hours — a 50% improvement in system reliability and patching SLA compliance.
- Implemented Infrastructure as Code (IaC) pipelines using Terraform and CloudFormation across AWS, Azure, and OCI environments, standardizing environment provisioning and reducing configuration drift in production deployments.
- Developed SOX-compliant AWS Backup reporting automation with cross-account aggregation into centralized monthly CSV reports, ensuring audit-readiness across the full cloud infrastructure estate.
- Engineered monitoring and alerting infrastructure using CloudWatch, SNS, and Datadog, improving mean time to detection (MTTD) for production incidents and supporting proactive performance optimization across cloud workloads.
- Implemented cloud security controls for AWS Secrets Manager with detailed user-level audit tracking, strengthening IAM governance posture and meeting enterprise compliance requirements.
- Automated GitLab inactive-user lifecycle management using Python and Bash scripting, reducing license consumption by ~10% monthly and improving cloud governance hygiene.
- Built Artifactory usage analytics and reporting automation covering 50+ repositories, providing platform engineering teams with actionable data for storage optimization and license management.
- Managed Kubernetes-based application deployments, maintaining container orchestration stability and supporting scalable, high-availability cloud application environments.
- Built and maintained GitLab CI pipelines for automated Artifactory validation workflows, integrating infrastructure automation into the CI/CD delivery lifecycle.

- Conducted Linux administration tasks across RHEL, Amazon Linux, and Oracle Linux systems — performing troubleshooting, performance tuning, user management, and OS-level security hardening in production environments.

KEY PROJECTS

Cross-Account AWS Backup Compliance Automation

- Automated backup validation and SOX-compliant reporting across 20+ AWS accounts using Python Lambda functions with cross-account IAM role assumption; centralized monthly reporting reduced manual audit effort by ~70%.

Zero-Day Windows Patching Automation (SSM + Lambda)

- Designed end-to-end patch automation using AWS Systems Manager (SSM) Run Command and Lambda event triggers for KB-based Windows patch deployment, cutting deployment time by 50% and eliminating unplanned downtime from manual patching.

Cloud Governance & Platform Automation Suite

- Delivered a suite of infrastructure automation scripts (Python, Bash) for GitLab user lifecycle management and Artifactory platform reporting, improving cloud governance, cost visibility, and operational efficiency across the platform engineering team.

CERTIFICATIONS

- RHCSA – Red Hat Certified System Administrator (2024)

EDUCATION

Bachelor of Computer Applications (BCA) | 2017 – 2020 | (10+2+3 = 15 Years Full-Time Education)
